

To go private or public?

The Graphic

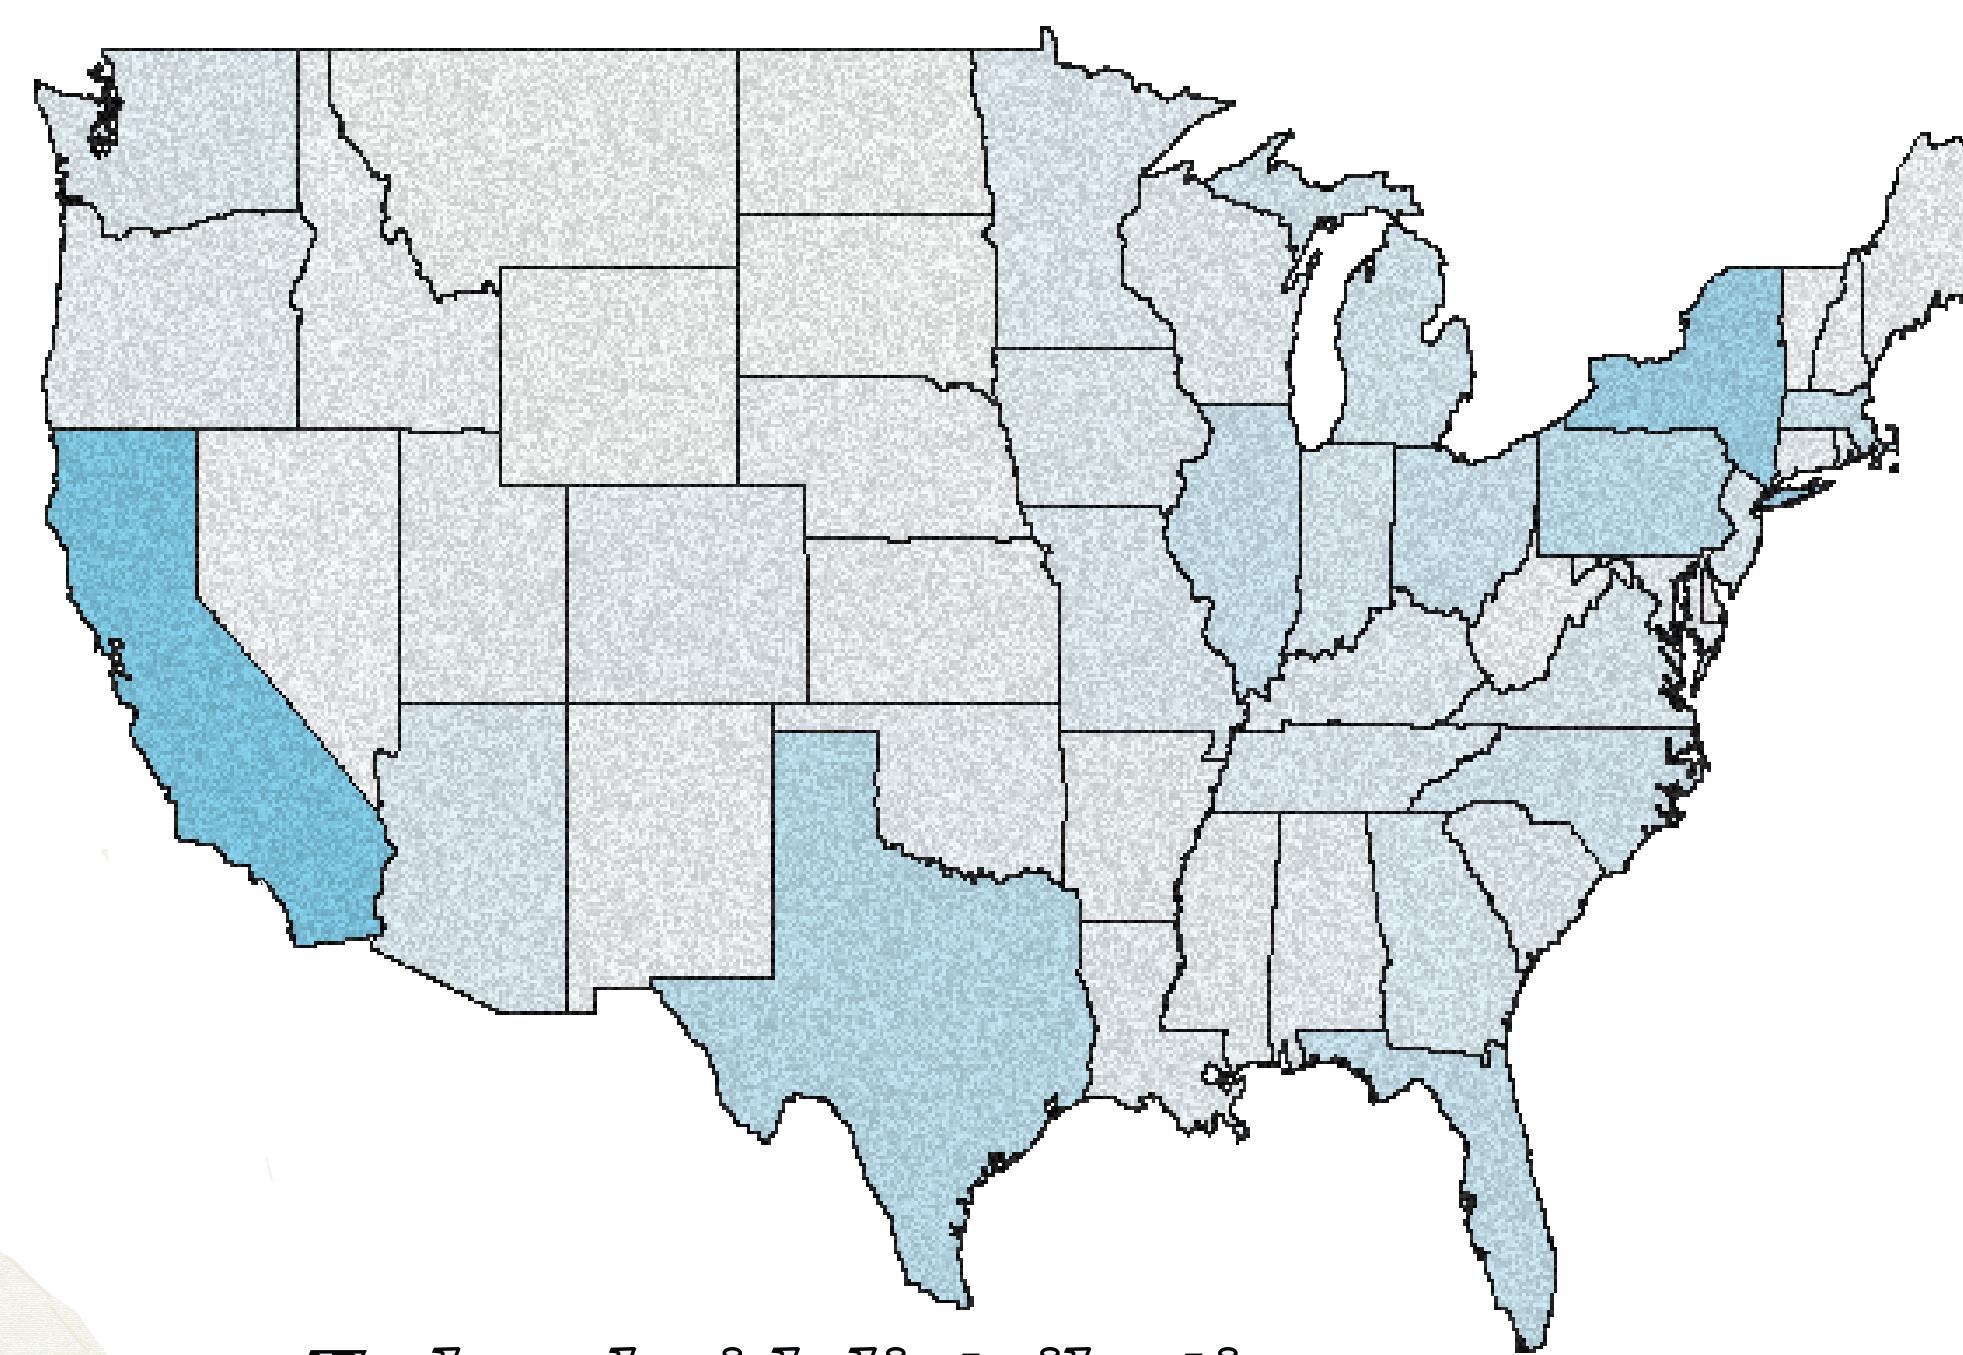

The graphic talks about the decision to go for public or Private universities. Many people tend to take these decisions based on the availability of federal aid and scholarships. The predominant perception is that the public universities offer more scholarship and are more cheaper to attend than their private counterparts. The graphic explains how federal aid distribution in private universities along with the endowment dollars help make private Universities a lot cheaper to attend.

Audience

The graphic is primarily used by students while taking decisions between universities ,but it can also be used by researchers in the education field

Source

Data is obtained from the data planet website and national post secondary education survey website

Sketches

The sketches are based on the data collected from the data planet website. The data was separated into public and private universities and the graphs were drawn using excel. The bar chart and pie chart were used to find enrollment and total federal aid distribution in the different universities for different years
